

Could your agency benefit by having access to Motor Vehicle Records?

Does your agency need to comply with motor pool risk management laws or rules?

MOTOR VEHICLE RECORD REQUEST SYSTEM (MVRRS)

The single access point for electronically accessing all Motor Vehicle Records (MVRs).

MVRs include Driver Records as well as Title and Registration Records.

Provided by the Arizona Department of Transportation (ADOT) Motor Vehicle Division (MVD).

The Motor Vehicle Record Request System (MVRRS) makes it easy for your agency to access Motor Vehicle Records (MVRs) via the web, File Transfer Protocol (FTP), or through a powerful programming interface that makes MVRRS fully customizable to your system requirements. MVRRS requires no special equipment, so there are no equipment charges, and enrollment in MVRRS is fast, easy, and free. MVRRS provides security, user data management, and management reports to help your agency effectively manage its business processes that require MVRs.

And better yet, MVRRS is hosted by Arizona @ Your Service State Portal (AAYS), so signing up for MVRRS involves no upfront cost to your agency!

With MVRRS you gain easy access to all Motor Vehicle Records provided by the Arizona Department of Transportation Motor Vehicle Division.

BENEFITS

- Provides easy access to all Arizona Motor Vehicle Records (MVRs).
- Makes MVRs available instantly at your web browser.
- Assists you in complying with motor pool risk management laws and rules.
- Provides three powerful, easy-to-use interfaces for requesting MVRRS data: 1) interactive or batch queries, 2) File Transfer Protocol (FTP), and 3) the MVRRS Application Program Interface (API) for customized, automated requests.
- Requires no equipment purchase.
- Enrollment is fast, easy, and free.
- MVRRS is available immediately.
- MVRRS file transfers are secured by state-of-the-art encryption and user ID/password authentication.
- Simplifies administration of your business processes with a suite of management reports.

Web

The Motor Vehicle Record Request System (MVRRS) provides agencies an easy-to-use web-based interface for conducting both interactive and batch* queries. Motor vehicle records are retrieved directly from the Motor Vehicle Division's (MVD's) records databases. If a query involves access to a single record, the results are displayed immediately at the browser. Results for batch* queries are available at the AAYS Portal for download via the browser.

Batch* query results are made available at frequent intervals throughout each day — requests are processed approximately every 2 hours.

File Transfer Protocol (FTP)

MVRRS also provides a File Transfer Protocol (FTP) interface to the AAYS Portal. Customers can FTP batch* queries to the Portal that will then be forwarded to MVD for processing. MVD responses are then stored on the Portal system for retrieval by the customer.

MVRRS Application Program Interface (API)

To support those customers requiring a completely automated customized approach to retrieving data, MVRRS provides a powerful Application Program Interface (API). To meet your agency's unique record retrieval needs, your agency can use the MVRRS API to write its own client / server application for submitting record requests. The MVRRS API defines the TCP/IP socket interface your agency will use to retrieve data via the Portal.

* batch query — programming charges may apply

Interactive Query

Interactive queries are easily performed via the MVRRS website using a simple form. Once a query is submitted, MVRRS immediately returns the results from MVD's database directly to your browser.

Interactive Query Page Sample

| Request Number | Date/Time | Service Type | Order Type | Results | Status | Cost | Payment Status |
|----------------|-----------------|--------------|------------|-----------|--------|--------|----------------|
| 372443 | 6/20/2003 11:39 | Direct | B | Available | 331.00 | Unpaid | |
| 372444 | 6/20/2003 11:39 | Web | B | Available | 331.00 | Unpaid | |
| 372466 | 6/26/2003 10:28 | Web | I | Complete | 4.25 | Unpaid | |

Response Page Sample

Batch* Query

Multiple records can be requested at one time using the Batch* Query option. Users can create file(s) containing query information for multiple records and submit for processing. Batches are processed at specific intervals and batch response files are made available for download on the AAYS Portal.

Batch* Query Page Sample

| Request Number | Date/Time | Service Type | Order Type | Results | Status | Cost | Payment Status |
|----------------|-----------------|--------------|------------|-----------|--------|--------|----------------|
| 372443 | 6/20/2003 11:39 | Direct | B | Available | 331.00 | Unpaid | |
| 372444 | 6/20/2003 11:39 | Web | B | Available | 331.00 | Unpaid | |
| 372466 | 6/26/2003 10:28 | Web | I | Complete | 4.25 | Unpaid | |
